

Workforce Planning & Skills Gap Analysis

Talent Capacity & Internal Mobility | Excel | HR / People Operations / Workforce Planning

BUSINESS PROBLEM: HR needs to determine whether current workforce skills, proficiency and available capacity can support upcoming business demand — and what action to take where they cannot.

1. Executive Summary

NimbusWorks Technologies is planning for October 2026–March 2027 across five business initiatives. The model connects current employees, assessed skills and available capacity to future role-skill requirements. The objective is to help HR decide whether to deploy existing talent, use internal mobility, upskill employees, or consider external hiring.

Current workforce	Available capacity	Future requirements	Action mix
48 employees / 48 FTE	11.15 FTE / 23.23%	18 role-skill requirements	8 Mobility 6 Hiring 2 Deploy 2 Upskill

2. HR Questions — Answered

HR question	Model answer
Sufficient available capacity?	48 FTE are currently represented, with 11.15 FTE available (23.23%); sufficiency varies by specific role-skill requirement.
Which roles have shortages?	Positive Capacity Gap identifies requirement-level shortages. Highest requirement-level demand is Software Engineer (8.75 FTE), Data Engineer (8.00) and Sales Executive (8.00).
Which skills have insufficient supply?	Each future skill is tested against employee skill, proficiency and available capacity; positive Capacity Gap flags insufficient qualified capacity.
How many meet proficiency?	Qualified Employees counts active employees with the required skill, proficiency at/above the threshold and available capacity.
Capability vs capacity?	The model separates qualified skill supply, available FTE and same-role supply, helping distinguish capability availability from usable capacity.
Who could be upskilled or moved?	Cross-role qualified employees form a mobility pool; employees below the threshold with available capacity form an upskill pool.
Where is external hiring likely?	External Hiring is assigned where the internal qualified and identified upskill options do not cover the requirement.
What should HR prioritise?	There are 9 Critical, 6 High and 3 Medium requirements. Critical requirements include 6 External Hiring, 2 Mobility and 1 Upskill.

3. Key Findings

- Internal Mobility is the largest intervention category: 8 of 18 requirements (44.4%).
- External Hiring is material: 6 of 18 requirements (33.3%) remain after the model's internal options are considered.
- Deploy / Allocate covers 2 requirements (11.1%); Upskill covers 2 (11.1%).
- Critical requirements total 9; 6 are classified as External Hiring.
- Software Engineer has the highest requirement-level demand at 8.75 FTE; Data Engineer and Sales Executive each have 8.00 FTE.

4. HR Recommendations

Prioritise Critical hiring pipelines — Six Critical requirements are classified as External Hiring; validate lead time, initiative deadlines and market availability.

Build an internal mobility slate — Eight requirements are classified as Internal Mobility; validate manager support, employee interest, transition time and workload impact.

Target upskilling — Use the two Upskill requirements to create skill-specific development plans rather than generic training.

Rebalance capacity first — Where qualified same-role or cross-role capacity exists, review workload redistribution before opening additional requisitions.

5. Analytical Controls & Limitations

- Employee IDs are unique in the workforce master and valid in the skill table.
- Available Capacity % is derived from Current Allocation %; $\text{Available FTE} = \text{FTE} \times \text{Available Capacity \%}$.
- $\text{Required FTE} = \text{Required People} \times \text{Capacity per Person}$.
- The proficiency scale is project-defined (1 Foundational, 2 Developing, 3 Proficient, 4 Advanced).
- Skill-level demand rows can overlap. Therefore, the model does not sum all skill-level gaps into a unique hiring target; such an aggregation could double-count employees.

6. Skills Demonstrated

- Excel Tables & structured references
- XLOOKUP
- COUNTIFS / SUMIFS
- IF decision logic
- PivotTables / PivotCharts
- Workforce planning and skills-based HR reasoning
